Observation Visit	CPT: 99217-99220				

How to Improve HEDIS® Scores

- The literature indicates that the patient is at greater risk for hospitalization within the first 7 days post-discharge, and that the risk of patient self-harm is high within the first 3 weeks post-discharge.
- Ensure that the follow-up appointment is made before the patient leaves the hospital and is scheduled within 7 days of discharge.
- Assist the patient with navigation of barriers, such as using their transportation benefit to get to their follow-up appointments.
- Review medications with patients to ensure they understand the purpose and appropriate frequency and method of administration.
- Ensure accurate discharge dates and document not just the appointments scheduled, but appointments kept. Visits must be with a mental health practitioner.
- Follow-up visits must be supported by a claim, encounter or note from the mental health practitioner's medical chart.
