

Developmental Screening in First Three Years of Life (DEV-CH)

Measure Description

The percentage of children screened for risk of developmental, behavioral and social delays using a standardized screening tool in the 12 months preceding or on their first, second, or third birthday

Use Correct Billing Codes

Description	CPT Code
Developmental Screening	96110

How To Improve Scores

- Follow AAP frequency recommendations for administering developmental screenings to ensure at least 1 is completed during *each* of the first three years of life
- Only use the CPT code identified above (96110), as no other developmental screening codes will trigger compliance
- If submitting supplemental data, the result/score must be documented on the submitted evidence
- Work developmental screening into age-appropriate visit templates
- Use a validated screening tool. Samples of approved tools include but are not limited to: Ages & Stages Questionnaire (ASQ), Ages and Stages Questionnaire (ASQ-3), Battelle Developmental Inventory Screening Tool (BDI-ST), Bayley Infant Neuro-developmental Screen (BINS), Brigance Screens-II, Child Development Inventory (CDI), Infant Development Inventory, Parents' Evaluation of Developmental Status (PEDS), Parent's Evaluation of Developmental Status - Developmental Milestones (PEDS-DM), Survey of Well Being of Young Children (SWYC)
- The M-CHAT and ASQ-SE are not approved for use to meet measure compliance
- Leverage Cozeva to identify care gaps. There may be developmental screenings for Members in your denominator that were not captured by coding in previous measurement years. Please submit these as supplemental data.
